ABHIJIT SANTRA

Aspiring Software Developer

Contact no: +91- | Email:

LinkedIn: Abhijit Santra | GitHub: abhijitsantra01

Sabang, West Midnapore, West Bengal, India, 721467

Career Objective:

Computer Science (AI & ML) student with hands-on experience in machine learning and NLP-based projects. Familiar with Python, C++, and modern AI tools. Interested in building practical, real-world solutions while continuously learning and improving skills in a collaborative environment.

Education:

BRAINWARE UNIVERSITY

B. Tech, Computer Science and Engineering (AIML)

(Anticipated – July, 2026)

CGPA – 8.63

Malpar Vivekananda Sikshaniketan, (WBCHSE)

Higher Secondary Examination (2022)

Marks - 94%

Chandkuri Union High School, (WBBSE)

Secondary Examination (2020)

Marks - 85%

Experience:

- Industrial Training in Machine Learning from Intel Unnati – 31st Jul to 13th Aug 2025

Certifications:

- Generative AI for Beginners from Simpli Learn – Mar 26
- Problem Solving (basic) from Hacker Rank – Aug 2025

Hobby & Interest:

Deep Learning

CNN, Image Tasks, Model Optimization

Interest in Science & Technology, exploring Hindu Mythology as well as Language and Culture of different places.

Skills:

Programming - Python, C++
AI/ML - ML, DL, NLP, CNN
Frameworks - TensorFlow, Keras, FastAPI, Streamlit
LLM/GenAI - CrewAI, Hugging Face, Prompt Engineering
Libraries - NumPy, Pandas, Matplotlib
Tools - Git, GitHub, MySQL

Projects:

- **Agentic Based Landing Page Generation (In Progress)**

Tech: *CrewAI, LLMs, FastAPI*
Description: Built an agent-based system using CrewAI to automate landing page creation. Designed multiple AI agents for research, copywriting, SEO structuring, and UI generation, enabling responsive, conversion-focused pages with minimal manual effort.
Tools: *mistral:7b-instruct-q4_0, gemini-2.5-flash*

- **Vendor News Analytics (Oct 31, 2025) |** Link

Tech: *Python, NLP, Transformers, LLMs*
Description: Built an automated vendor news analysis system using NLP & LLMs that extracts, summarizes, and performs sentiment analysis on financial news, reducing manual analysis effort by ~70%.
Tools: *DistilBERT* (sentiment analysis), *GPT-4o-mini* (report generation)

- **Deepfake Video Detection|** Live

Tech: Python, TensorFlow, Keras, OpenCV, Streamlit
Description: Developed an end-to-end deep learning application to classify videos as real or fake using CNN and OpenCV. Built a preprocessing pipeline for frame extraction and efficient inference. Currently improving performance using advanced architectures and facial-region-based analysis.
